

# Changes In Version 1.2.1 of XePersian Package

VAFA KHALIGHI

September 20, 2011

So far, XePersian defined several additional counters to what already L<sup>A</sup>T<sub>E</sub>X offers. These counters are **harfi**, **adadi**, and **tartibi**. The **tartibi** and **adadi** counters were very limited (you only could count for integers between 1 and 20) but now the range of these two counters are enlarged. In addition, the following commands are also provided:

<code>\harfinumeral{⟨integer⟩}</code> <code>\adadinumeral{⟨integer⟩}</code> <code>\tartibinumeral{⟨integer⟩}</code>
---

- The range of **harfi** counter is integers between 1 and 32 (number of the Persian alphabets) and **adadi** and **harfi** counters, are integers between 0 and 999,999,999.
- `\harfinumeral` returns the **harfi** form of  $\langle integer \rangle$ , where  $1 \leq integer \leq 32$  and `\adadinumeral`, and `\tartibinumeral` return **adadi**, and **tartibi** form of  $\langle integer \rangle$  respectively, where  $0 \leq integer \leq 999,999,999$ .
